Choose your flow

Goal: pick the right guide for what you want to build.

You get: a one-page map from your goal to the matching step-by-step guide.

Product	Turns on	Typical use
Admin (always on)	Users, Roles, Settings, Identity, Media	Internal business app
Website	Content, Menus, Page builder, Theme engine, Media	Multi-page company site
Landing Pages	Landing, Page builder, Theme engine, Media	Campaign and product pages

Pick your combination

You want	Products to tick	Guide
Only the internal admin app	Admin	01 Admin only
Only campaign pages	Admin + Landing Pages	02 Landing page only
A website you host anywhere as plain files	Admin + Website, then Convert	03 Static website only
A live website with the admin	Admin + Website	04 Web app and admin
A live website and campaign pages	Admin + Website + Landing Pages	05 Web app, landing and admin
Plain-file website plus campaign pages	Admin + Website + Landing, then Convert	06 Static website and landing
Live site that is also exported as plain files	Admin + Website, then Convert	07 Web app and static website
Everything	All three	08 Full platform

Admin is always on, so "only landing page" still includes the admin you sign in to.

How to decide quickly

1. Need people, roles and settings only? **Admin only**.
2. Need one or a few campaign pages? **Landing**.
3. Need a multi-page site that talks to forms and menus live? **Web app**.
4. Need cheap, fast, serverless hosting? **Static** (built from the Web app, then exported).

5. Unsure? Start with **Web app and admin**; you can add Landing or convert to static later without losing data.

Changing your mind later

Open **/admin/settings/products**, change the ticks, **Apply products**. Turning a product off hides menu entries; it never deletes pages, users or files.

Check it worked

- Open the public address in a private window, signed out.
- Header, top bar and footer match Home on every page.
- Every menu link opens a page; forms send (Web app) or show your contact details (static).
- Admin sidebar shows only the modules your products need.
