Flow 1: Admin only

Goal: run the internal business application with no public website.

You get: a secured admin app: users, roles, company identity, themes, notifications and activity log.

Product	Turns on	Typical use
Admin (always on)	Users, Roles, Settings, Identity, Media	Internal business app
Website	Content, Menus, Page builder, Theme engine, Media	Multi-page company site
Landing Pages	Landing, Page builder, Theme engine, Media	Campaign and product pages

1. Sign in and run the first-time setup

1. Open **http://localhost:3001/login** and sign in with your admin account.
2. On a fresh install the **Setup wizard** opens by itself.
    - **Step 1 of 2: company details.** Name, logo, emails, phones, address. Saved once in **Settings > Identity** and reused everywhere (admin, website, print layouts).
    - **Step 2 of 2: what are you building?** Tick the products you need (see the table below). Admin is always on. The screen shows what each choice turns on before you press **Apply products**.
3. Missed the wizard? Company details live in **Admin Settings > Identity**; products live at **/admin/settings/products**. Turning a product off never deletes data.

Admin application (always included)

Everything below is available from the first sign-in and does not depend on any website product.

Need	Where
Add people	**Users** (add, suspend, reset)
Decide who can do what	**Access Control > Roles / Permissions** (Super Admin, Developer, Admin, User defaults)
Company name, logo, contacts	**Admin Settings > Identity**
Admin look (colours, fonts)	**Admin Settings > Themes**, choose **Admin app**, Simple or Advanced, **Publish**
Turn capabilities on or off	**Modules** (a module that is off has no menu entry)
Alerts and integrations	**Notifications**, **Integrations**
Who did what	**Access Control > Activity Log**
Files	**Media > Library**; storage under **Settings > Storage**

Tick only Admin

In the Setup wizard, Step 2 of 2, leave **Website** and **Landing Pages** off and press **Apply products**. The wizard records "no website" and stops asking. Public-site menu entries stay hidden.

Check it worked

- Open the public address in a private window, signed out.
- Header, top bar and footer match Home on every page.
- Every menu link opens a page; forms send (Web app) or show your contact details (static).
- Admin sidebar shows only the modules your products need.
