Flow 4: Web app and admin

Goal: run a live, editable website served from this installation.

You get: a live site on the same address as the admin, with menus, forms, detail pages and the page editor.

Product	Turns on	Typical use
Admin (always on)	Users, Roles, Settings, Identity, Media	Internal business app
Website	Content, Menus, Page builder, Theme engine, Media	Multi-page company site
Landing Pages	Landing, Page builder, Theme engine, Media	Campaign and product pages

1. Sign in and run the first-time setup

1. Open **http://localhost:3001/login** and sign in with your admin account.
2. On a fresh install the **Setup wizard** opens by itself.
   - **Step 1 of 2: company details.** Name, logo, emails, phones, address. Saved once in **Settings > Identity** and reused everywhere (admin, website, print layouts).
   - **Step 2 of 2: what are you building?** Tick the products you need (see the table below). Admin is always on. The screen shows what each choice turns on before you press **Apply products**.
3. Missed the wizard? Company details live in **Admin Settings > Identity**; products live at **/admin/settings/products**. Turning a product off never deletes data.

Tick **Website**. Answer **yes** when the wizard asks to create the first site.

Build the website (Web app)

The Web app is the live website served by this installation, from the same address as the admin.

1. **Frontend > Brands**, choose **Web app** (the Studio / Template Engine). First time: press **Start Studio run**.
2. **Overview**: upload the logo, confirm company and contact details, **Next**. The logo also becomes the admin logo.
3. **Color Palette**: four brand colours are taken from the logo. Keep or edit them (hex, Randomize, eyedropper), **Submit palette**.
4. **Approval**: the brand kit is approved by a person; the colours become design tokens in the Theme Engine.
5. **Website stage** (Brands > Web app): **Typography**, **Font settings**, optional **Buttons and form fields** style, **Navigation** (one page per menu item, plus Home), then **Pages** to assemble them.

6. **Layouts**: pick the Top header, Header and Footer designs. Home's header and footer are shared by every public page.
7. **Fill the content**: Sectors, Catalog, Work, FAQ, Case Studies, Team, Testimonials, Gallery. Each Sector, Catalog and Work entry gets its own detail page.
8. **Navigation** (menus): fine-tune header and footer menus. No re-run needed.
9. **Pages / page editor / Sections**: edit blocks, **Publish**. Publish checks stop real problems (empty page, missing title, broken link, image without source) and only suggest the rest.
10. **Go live**: pages are public at `/`, `/p/<slug>`, `/sectors/<slug>`, `/catalog/<slug>`, `/work/<slug>`.

After a change, re-run only what changed: logo or contacts: save Overview. Navigation: Navigation then Pages. Header or footer design: Layouts. Colours or fonts: Color Palette or Typography, Approval, then re-run Website. Entry text or menus: edit in place.

Admin application (always included)

Everything below is available from the first sign-in and does not depend on any website product.

Need	Where
Add people	**Users** (add, suspend, reset)
Decide who can do what	**Access Control > Roles / Permissions** (Super Admin, Developer, Admin, User defaults)
Company name, logo, contacts	**Admin Settings > Identity**
Admin look (colours, fonts)	**Admin Settings > Themes**, choose **Admin app**, Simple or Advanced, **Publish**
Turn capabilities on or off	**Modules** (a module that is off has no menu entry)
Alerts and integrations	**Notifications**, **Integrations**
Who did what	**Access Control > Activity Log**
Files	**Media > Library**; storage under **Settings > Storage**

Check it worked

- Open the public address in a private window, signed out.
- Header, top bar and footer match Home on every page.
- Every menu link opens a page; forms send (Web app) or show your contact details (static).
- Admin sidebar shows only the modules your products need.
