Choose your flow

Goal: match what you want to build with the step-by-step guide that covers it from clone to publish.

Pick a flow › Open its guide › Clone and run › Enable modules › Build › Publish

Pick your combination

You want	Products to tick	Guide
Only the internal admin app	Admin (always on)	01 Admin only
Only campaign pages	Landing Pages	02 Landing page only
A website hosted anywhere as plain files	Website, then Convert	03 Static website only
A live, editable website	Website	04 Web app and admin
A live website and campaign pages	Website + Landing Pages	05 Web app, landing and admin
Plain-file website plus campaign pages	Website + Landing Pages, then Convert	06 Static website and landing
Live site that is also exported as plain files	Website, then Convert	07 Web app and static website
Everything, with optional Membership	Website + Landing Pages	08 Full platform

Admin is always on, so "only landing page" still includes the admin you sign in to.

What every guide contains

1. **Installation guide** (Git, Docker, `.env`, `docker compose up`, create the admin, sign in) is its own guide: do it first.
2. **Part B.** The first-run Setup wizard, screen by screen.
3. **Part C.** Which modules to enable, and how, with the real Modules and Products screens.
4. **Part D.** The build steps for that flow, with screenshots of each screen.
5. A checklist, everyday commands and a troubleshooting table.

The products at a glance

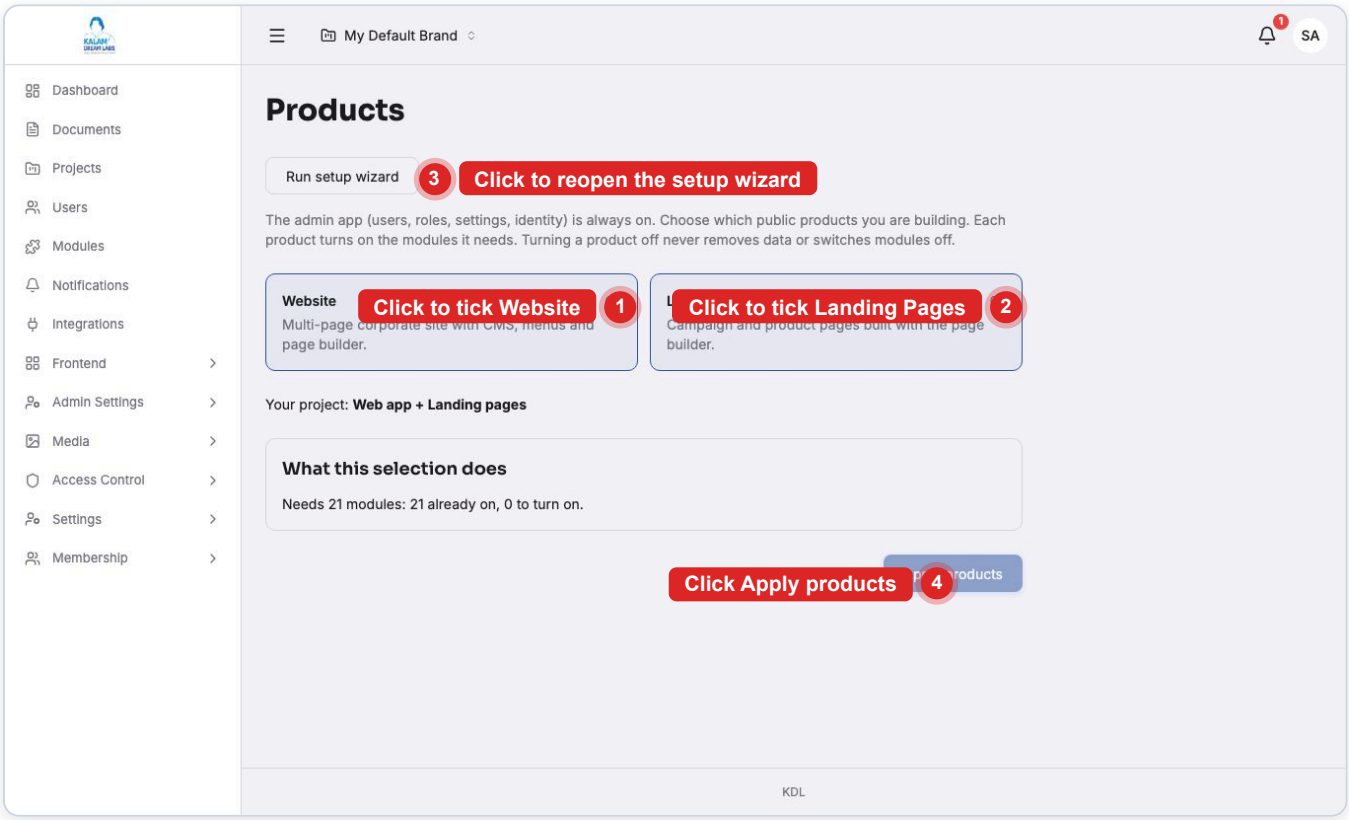

Product	Turns on	Typical use
Admin (always on)	Users, Roles, Settings, Identity, Media	Internal business app
Website	Frontend, Website, Page Editor UI, Themes, Media	Multi-page company site
Landing Pages	Landing Pages, Page Editor UI, Themes, Media	Campaign and product pages

How to decide quickly

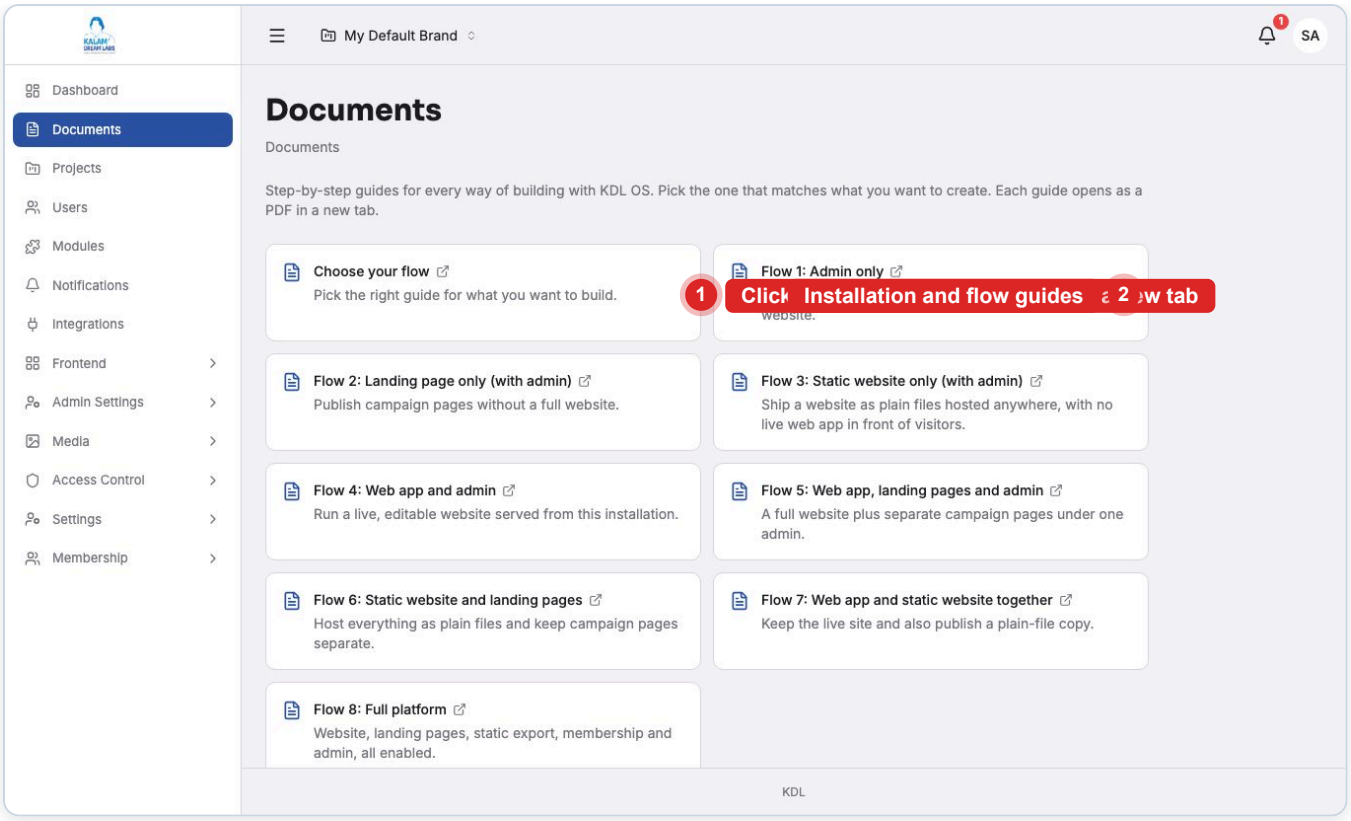

1. People, roles and settings only? **Admin only**.
2. One or a few campaign pages? **Landing**.
3. A multi-page site with live forms and menus? **Web app**.
4. Cheap serverless hosting? **Static** (built in the Web app, then exported).
5. Unsure? Start with **Web app and admin**. Landing or static can be added later without losing data.

Changing your mind later

/admin/settings/products: change the ticks and apply. Turning a product off hides menu entries; it never deletes pages, users or files.
